Kervin Vasquez Hernandez

Senior Software Engineer at Mentor Collective | AI/ML Practitioner |
Python | Ruby | TypeScript | React
Los Angeles, California, United States

Summary

Software engineer focused on building scalable systems and delivering meaningful, user-centered solutions. I take a pragmatic approach to complex problems, working across the stack and choosing the right tools for each context.

I'm experienced in backend platforms, modern frontends, and data-driven architecture, including applied AI. I thrive in collaborative teams where engineers contribute to technical direction, own outcomes, and ship with purpose.

Experience

Mentor Collective

4 years 8 months

Senior Software Engineer

February 2024 - Present (1 year 6 months)

Software Engineer

December 2020 - February 2024 (3 years 3 months)

Mentor Collective is the leading provider of impact-driven mentoring programs. MC partners with universities to provide all students with a relevant, trained peer, professional, or alumni mentor.

Mentor Collective partner institutions have seen an average reduction in melt rates of -13.79% and an average effect on retention of +3.84%, with a total of over 75,000 mentorships created since inception in 2015.

CareerFoundry

Web Development Tutor

May 2021 - February 2022 (10 months)

- Identifying individual student needs and strategizing on how to close specific skill gaps by suggesting supplementary learning materials for areas where students may be struggling.

- Evaluating student work and giving actionable suggestions to improve the quality of student submissions and portfolio projects.
- Working closely with mentors to provide guidance and advice to students on creating an job-ready portfolio of project work in line with current industry standards and best practices.

Exact Staff

Web Developer

September 2017 - December 2020 (3 years 4 months)

Woodland Hills, California

- Lead the design and implementation of gamified job board using NextJS and GraphQL to increase the engagement with associates and generate great matches between candidates and employers.
- Lead the design and implementation of an electronic signature system with React, Mongo and Express whose objective is to decrease the time required to onboard new employees and streamline the hiring process.
- Developed a web application with PHP, MySQL and SOAP to automate the access to payroll history for internal employees, drastically reducing the workload for the payroll department.
- Designed and developed a JS application to enable customers to access real-time analytics of employee attendance which improved customer satisfaction and eliminated the need of manual reports.
- Developed a JavaScript-based signage system using Electron and React to stream job listings, pictures and news in real time to more than 20 offices.

Job Friender

Fullstack Web Developer

July 2017 - June 2018 (1 year)

- Work closely with the founders to spec and implement core products and features.
- Implement new interfaces and functionality from the ground up, including the APIs.
- Contribute to the development of our front and backend architecture using modern development practices.

Sherman Oaks Hospital

System Analyst

April 2015 - September 2017 (2 years 6 months)

- Researched about new technologies and different ways to improve the performance and usability of existing applications and APIs.

- Developed a patient experience platform that made easier to keep track of issues related to patient satisfaction.
- Designed, developed and deployed a rails application that enabled employees to provide feedback about current projects and possible issues in their departments.
